

COMPANY PROFILE

ASSET MANAGEMENT

Innovative Thinking; Simple Solutions.

ASSET MANAGEMENT

BlaqSkye provides Asset management services ranging from Asset Development Funding to Technical advisory for Oil & Gas Producing Companies. With over 15 years of experience, we offer collaborative solutions to clients within the Oil & Gas, Power and Energy Industry as a whole.

Our understanding of the African Asset and Energy landscape coupled with a global perspective make BlaqSkye a formidable partner.

VISION

To be the leading asset management team
in Africa by 2030

MISSION

To create lean, efficient and profitable energy
businesses.

VALUES

Integrity and Professionalism

Innovative Thinking; Simple Solutions.

1.1. TECHNICAL ADVISORY

1.1.1. Project Management/Monitoring

Projects fail for multiple reasons such as scope creep, poor resource utilization and incompetence to name a few. We offer practical and cost effective management techniques adapted for African climates to ensure that your projects are top quartile with zero cost overruns.

1.1.2. Conceptual Study

Oftentimes, high yield opportunities require significant expertise and know-how to unearth the diamond in the rough. BlaqSkye Energy has consistently created value out of little or nothing. With our team, your asset can be developed into a world class facility, with all financial and commercial factors optimized for maximum returns. Typical deliverables include FDPs, CSR, etc.

1.1.3. Technology Deployment

We actively deploy new innovative technology to solve production subsurface and surface challenges or glitches. Our objective is to make sure the field development is cost effective, safe and efficient. Solutions to maximise well productivity and facility debottlenecking are in the offing.

1.1.4. Engineering Design

The ideal facility is one that requires minimal OPEX for operations or CAPEX for expansions or modifications. Our team of engineers with experience across multiple IOCs and countries, produce designs with this guiding principle in mind.

1.1.5. QA/QC

History is littered with examples of million dollar oil and gas investments that failed due to very little quality oversights such as a missing bolt or wrong material. We take quality control and assurance very seriously and this is evidenced by our 10 step QA/QC process and digital enablers which guarantee that your facility is built and operated to the highest quality standard.

1.1.6. Facility Manual & Procedure Development

During audits, we find that both new and existing facilities do not have standard and high quality documentation to support operations and manpower training. Manuals are outdated or missing. This is a very dangerous situation for companies that now have to rely on the knowledge of individuals alone. BlaqSkye Energy has developed a robust retention and document development process which provides fully digital manuals and procedures to support the operation of the facility.

1.2. FINANCING

Capital Project Funding 1.2.1.

Capital Project Funding - We leverage on our global reach to provide project funding to oil and gas producing companies that have credible development projects.

Opex Funding 1.2.2.

OPEX funding - For companies in the operate phase, we have a range of short to mid-term funding options to ensure business continuity in production operations.

1.3. COMMERCIALS TO OIL & GAS PRODUCERS

Contract negotiations & Structuring 1.3.1.

Our services include providing fit for purpose commercial structures for oil and gas supply and transportation agreements. We can negotiate contract terms and conditions to ensure value preservation and portfolio optimization.

Contract Operationalisation 1.3.2.

We provide contract performance managers to ensure daily monitoring of contract, manage nominations, notifications and optimization of scheduled maintenance activities to achieve minimal downtime in operation, working closely with the necessary regulatory bodies to ensure compliance.

Mergers & Acquisitions 1.3.3.

We have a pool of certified experts in M&A who can lead and coordinate farm-in/farm-out agreements between multiple parties, commodity pricing negotiations etc. This advisory takes into account regulatory requirements and policies.
